

Homework Assignment 1 – Solutions

September 29, 2013

1 Deriving adjectives from nouns and suffixes

```
ghci 1> let { nouns, suffixes, adjectives :: [String];  
             nouns = ["color", "faith", "use"];  
             suffixes = ["ful", "less"];  
             adjectives = [x ++ y | x <- nouns, y <- suffixes] }
```

```
ghci 2> nouns  
["color", "faith", "use"]
```

```
ghci 3> suffixes  
["ful", "less"]
```

```
ghci 4> adjectives  
["colorful", "colorless", "faithful", "faithless", "useful", "useless"]
```

2 Split a text on whitespace, count words

```
ghci 5> let text = "Pierre Vinken , 61 years old , will join the board " ++  
             "as a nonexecutive director Nov. 29 . Mr. Vinken " ++  
             "is chairman of Elsevier N.V. , the Dutch publishing group ."
```

```
ghci 6> text  
"Pierre Vinken , 61 years old , will join the board as a nonexecutive director Nov. 29 . Mr.  
Vinken is chairman of Elsevier N.V. , the Dutch publishing group ."
```

A. Split this text on whitespace and print the resulting list of words:

```
ghci 7> let text_words = words text
```

```
ghci 8> text_words
```

```
[ "Pierre", "Vinken", "", "61", "years", "old", "", "will", "join", "the", "board", "as",
  "a", "nonexecutive", "director", "Nov.", "29", ".", "Mr.", "Vinken", "is", "chairman",
  "of", "Elsevier", "N.V.", "", "the", "Dutch", "publishing", "group", "."]
```

B. Determine the length of this list, i.e., how many words we have in the text:

```
ghci 9> length text_words
```

```
31
```

3 Extract lengths, determine shortest and longest words, determine average word length

A. Generate the list of lengths for all the words:

```
ghci 10> let length_words = map length text_words
```

```
ghci 11> length_words
```

```
[6, 6, 1, 2, 5, 3, 1, 4, 4, 3, 5, 2, 1, 12, 8, 4, 2, 1, 3, 6, 2, 8, 2, 8, 4, 1, 3, 5, 10, 5, 1]
```

B. Identify the minimum and maximum length in the list:

```
ghci 12> let min_length = minimum length_words
```

```
ghci 13> min_length
```

```
1
```

```
ghci 14> let max_length = maximum length_words
```

```
ghci 15> max_length
```

```
12
```

C. List all the words that have the minimum length and also all the words that have the maximum length:

```
ghci 16> [word | word ← text_words, length word ≡ min_length]  
["", "", "", "a", ".", ",","."]
```

```
ghci 17> [word | word ← text_words, length word ≡ max_length]  
["nonexecutive"]
```

D. Determine the average word length in this text:

```
ghci 18> sum length_words  
128
```

```
ghci 19> length length_words  
31
```

```
ghci 20> fromIntegral (sum length_words) / fromIntegral (length length_words)  
4.129032258064516
```

4 Write a function that behaves like *drop*

```
ghci 21> let { drop' :: Int → [a] → [a];  
           drop' [] = [];  
           drop' n xs@(y:ys)  
             | n ≤ 0 = xs  
             | n > 0 = drop' (n - 1) ys }
```

```
ghci 22> drop' 5 "Supercalifragilisticexpialidocious"  
"califragilisticexpialidocious"
```

```
ghci 23> drop' 9 "Supercalifragilisticexpialidocious"  
"fragilisticexpialidocious"
```

```
ghci 24> drop' 0 "Supercalifragilisticexpialidocious"  
"Supercalifragilisticexpialidocious"
```

```
ghci 25> drop' (-3) "Supercalifragilisticexpialidocious"  
"Supercalifragilisticexpialidocious"
```

```
ghci 26> drop' 4 ""  
""
```

And this is an alternative definition:

```
ghci 27> let { drop'' :: Int → [a] → [a];  
drop'' n xs =  
  if n ≤ 0 ∨ null xs  
  then xs  
  else drop'' (n - 1) (tail xs) }
```

```
ghci 28> drop'' 5 "Supercalifragilisticexpialidocious"  
"califragilisticexpialidocious"
```

```
ghci 29> drop'' 9 "Supercalifragilisticexpialidocious"  
"fragilisticexpialidocious"
```

```
ghci 30> drop'' 0 "Supercalifragilisticexpialidocious"  
"Supercalifragilisticexpialidocious"
```

```
ghci 31> drop'' (-3) "Supercalifragilisticexpialidocious"  
"Supercalifragilisticexpialidocious"
```

```
ghci 32> drop'' 4 ""  
""
```
