ENVS 25: Environmental Policy and Economics
Winter 2017
M/W/F 4-5.05pm, Media Theater M110

Instructor
Prof. Adam Millard-Ball
Office hours: Fridays 1.30-3.30pm
ISB 459

Teaching Assistants
Rachel Shellabarger
Office hours: Thursdays 1-3pm
NatSci2 429

Amber Kuss McCullum
Office hours: Wednesdays 5.30-7.30pm
NatSci2 475

Please contact us via Piazza, not via e-mail. That helps us manage the course efficiently, and you'll get a faster reply. See below for details of how to access Piazza and how to send private messages. Or talk to us after class.

Course Description
This course introduces you to the policy and economic dimensions of some of the most pressing environmental challenges facing us today. Through case studies on topics such as population, water and transportation, we will examine the economic underpinnings of environmental problems, and the extent to which policy responses have been successful.

Course Goals
After completing this course, you should be able to:

- Employ key concepts from philosophy, politics, law and economics that help us understand today’s environmental problems
- Understand the different ways in which environmental policy can be made
- Have sufficient policy and economic literacy to participate in interdisciplinary conversations
- Appreciate some of the tradeoffs between different policy goals, and the imperfections of some environmental policies

Reading
There is no required textbook for this course. All readings will be available on Canvas.

iClickers
You must bring an iClicker to class every day. We will use the clickers to record attendance, for in-class quizzes, and for in-class discussion-based questions. It is your responsibility to remember your clicker and to ensure that it is fully functioning. If you choose to use the smartphone app version, it is your responsibility to make sure you have internet connectivity.

iClickers can be purchased at the Bay Tree Bookstore. An app for Android and iPhones is also available. See www1.iclicker.com/purchase-response-devices for more information. (Either version of the iClicker is fine.)

Please see the iClicker FAQs for this course, which are posted on Canvas.

</table>

Attendance and quizzes

We will have regular in-class quizzes. These will be used to both record attendance and to test your knowledge of the readings or lecture material. We will also have several quizzes administered via Canvas.

Each student has four “free passes” for attendance (after the first day of class). These passes cover illnesses, family emergencies, forgetting your clicker, flat batteries, and other reasons for not being present AND using your clicker. Use them wisely! If you have an extended medical or related absence (e.g. a week or more), please talk with the professor.

Online and/or section participation

There are three ways for you to participate outside of lecture: weekly discussion sections, Modified Supplemental Instruction, and the discussion forums on Piazza. See below for more details. You can choose which option you prefer, but you must do at least one each week (after Week 1) in order to receive any credit.

Midterm and Final Exam

Questions on the midterm and final exams may address any of the material in the course, including readings and lectures. The final exam will be cumulative. You are expected to listen actively and take notes in class. If you miss a class, please talk with another student. All slides will be posted on Canvas, but you are expected to take your own, more detailed notes to complement the text on the slides.

There will be no makeup dates for the midterm and final examinations. If you have other commitments on these dates, please do not enroll in the course.

Class Schedule

The class schedule indicates the broad sequence of modules. The lecture slides (posted on Canvas in advance of each module) will give more details about the precise topics. Required readings will also be posted in advance of each module. You can expect 2-3 readings per class, with an average of 30-50 pages of reading per week.

Piazza

We will be using Piazza for class discussion. The system is catered to getting you help from classmates, the TAs, and myself. You should use Piazza for two purposes:

- Discussing and clarifying the lecture material and readings, and debating how the concepts introduced in lecture apply to other real-world examples. Your contributions will count towards your participation grade, but quality (i.e., well thought out questions or responses) is more important than quantity. Since the responses are written in a collective wiki-style format, please make sure to include your name after your contribution, like this. [Adam Millard-Ball]
- Asking administrative and logistical questions of the professor or TAs. Rather than emailing us, please post your questions on Piazza. You can post a private message that will only be visible to the professor and/or TAs, or make the question public if you think the answer will be useful to other students.

Find our class page at: https://piazza.com/uconline/winter2017/envs25/home. Please remember to use professional language and show respect for the viewpoints of others.

Discussion Sections

The weekly discussion sections will focus on applying the concepts introduced in lecture and readings to current events, as well as some review of the lecture material. The discussion sections are designed to give you an opportunity to talk through your ideas, understand the viewpoints of others, and to gain a deeper understanding of the course materials.

Attendance will count towards your participation grade and will also help you do well on the midterm and final exams.

Sections will be led by the graduate teaching assistant or undergraduate teaching interns. The interns are students who previously performed well in this course, and have additional experience in environmental policy and/or education. A schedule is posted on Canvas.

Modified Supplemental Instruction

Modified Supplemental Instruction (MSI) gives students the opportunity to learn together in small groups led by an advanced Student Learning Assistant. MSI is guaranteed study/learning time facilitated by someone who has already been successful in the class. In contrast to the discussion sections, MSI will focus more on reviewing and explaining concepts from the lectures. For more information, see http://www2.ucsc.edu/lss/msi.shtml

The MSI schedule is here: http://eop-apps.ucsc.edu/msi/msischedule.cfm

The Student Learning Assistants for this course are:
- Kira Akka-Seidel, kakkasei@ucsc.edu
- Demir Worthington, dworthin@ucsc.edu
Academic Integrity

Students are expected to adhere to the UCSC policy on academic integrity: http://www.ucsc.edu/academics/academic_integrity/. Unless otherwise stated in writing, all assignments should be written individually and be original works for this class. All academic integrity violations (e.g. plagiarism, cheating, multiple submissions, facilitating dishonesty) will be prosecuted if encountered.

Academic integrity includes the use of iClickers. Asking another student to “sign in” for you with your clicker, or doing that yourself for another student, is a serious academic integrity violation.

Accessibility and Disabilities

If you qualify for classroom accommodations because of a disability, please submit an Accommodation Authorization from the Disability Resource Center (DRC) to Prof. Millard-Ball within the first two weeks of the quarter. You may submit these outside of class (e.g., office hours) to ensure anonymity. Contact DRC at 831-459-2089 (voice), 831-459-4806 (TTY), or http://drc.ucsc.edu for more information on the requirements or process.

ENVS Program Learning Outcomes

The ENVS major and combined majors have a set of Program Learning Outcomes (PLOs) that we hope each class will contribute to achieving. Here are those PLOs. This course will specifically strengthen your ability to achieve PLO #1.

Students graduating with a B.A. in Environmental Studies should be able to:
1. Identify the societal (social, political, economic, cultural and ethical) agents and structures that contribute to environmental change. (social science competency)
2. Describe the structure and functioning of major physical and ecological components of the earth’s systems. (natural science competency)
3. Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
4. Demonstrate effective oral and written communication skills. (communication skills)
